Print this page and cut out each page you wish to use. Note the pages above are of the passport opened. It may be helpful to view the 1/12th scale Passport Printie page for reference.

The passport typically has 7 pages plus the cover. But for 1/48th scale, I suggest using the cover and one inside page due to thickness.

Fold the cover and inside page in half with the printing to the inside for the inside page.

Apply small amount of glue to the cover and insert the folded inside page. Open it while still wet to be sure it will.

Trim any extra of the inside page beyond the cover.

Cut the two outside corners at angle and then carefully sand to round them using an emery board.
